Estimated Total Number of Errors is 0. NOTE: This sequence is not the entire sequence of the clone. is sequence generated to span the gap between AC005390 and AC011553. The overlap with AC005390 is 1172bp and the overlap AC011553 is 1062bp. The sequence was finished by the Stanford Human Genome Center and Los Alamos National Laboratory.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Submitted (24-OCT-2001) DOE Joint Genome Institute, 2800 Mitchell Drive, Walnut Creek, CA 94598, USA

It currently consists of 13 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              36485: contig of 36485 bp in length

                                                                                                                                                                                                     www-shgc.stanford.edu
Quality: Phrap Quality >=40 98.4% of Sequence;
Estimated Total Number of Errors is 0.

NOTE: This sequence is not the entire sequence of the clone.
Is sequence generated to span the gap between AC003390 and
AC011553. The overlap with AC005390 is 1172bp and the overlap
AC011553 is 1062bp. The sequence was finished by the Stanford
Human Genome Center and Los Alamos National Laboratory.
                                                                                                                                                                                                                                                                                                                                                                                               Submitted (24-OCT-2001) DOE Joint Genome Institute, 2800 Mitchell Drive, Walnut Creek, CA 94598, USA on Oct 24, 2001 this sequence version replaced gi:15144408.
